

OPTOMETRIC PHYSICIANS NORTHWEST

# NO DILATION EYE EXAMS NOW AVAILABLE

Do you LOVE when your eyes are dilated and your whole day is difficult  
and blurry?

Neither do we.

We are proud to introduce the latest cutting edge technology in  
retinal imaging, the Optomap!

This new device takes a quick scan of your eye (we're talking speeds like the flash of a camera) delivering an image that sees FAR more of your retina than ever before without dilation!

Now you can take an active role in preserving your valuable sense of sight.

The Optomap makes it easier to accurately detect threatening conditions like glaucoma, macular degeneration, and diabetic retinopathy.

You'll see a picture of your retina immediately following the scan.

## GREAT FOR KIDS

The Optos can greatly ease the stress of an eye exam for young kids, and helps to shorten exam time. (While this doesn't skip child dilation, it does aid in clear diagnosis of brain/eye development)
